## Cryptographic Module Validation Program CMVP

### Certificate #3859

Details																							
Module Name	Apple corecrypto User Space Module for Intel (ccv10)																						
Standard	FIPS 140-2																						
Status	Active																						
Sunset Date	3/23/2026																						
Validation Dates	03/24/2021																						
Overall Level	1																						
Caveat	When operated in FIPS mode																						
Security Level Exceptions	<ul style="list-style-type: none"> <li>Physical Security: N/A</li> </ul>																						
Module Type	Software																						
Embodiment	Multi-Chip Stand Alone																						
Description	The Apple corecrypto User Space Module for Intel (ccv10) is a software cryptographic module running on a multi-chip standalone hardware device and provides services intended to protect data in transit and at rest.																						
Tested Configuration(s)	<ul style="list-style-type: none"> <li>macOS Catalina 10.15 running on iMac Pro with an Intel Xeon W with PAA</li> <li>macOS Catalina 10.15 running on iMac Pro with an Intel Xeon W without PAA</li> <li>macOS Catalina 10.15 running on Mac mini with an Intel Core i5 with PAA</li> <li>macOS Catalina 10.15 running on Mac mini with an Intel Core i5 without PAA</li> <li>macOS Catalina 10.15 running on MacBook Pro with an Intel Core i7 with PAA</li> <li>macOS Catalina 10.15 running on MacBook Pro with an Intel Core i7 without PAA</li> <li>macOS Catalina 10.15 running on MacBook Pro with an Intel Core i9 with PAA</li> <li>macOS Catalina 10.15 running on MacBook Pro with an Intel Core i9 without PAA</li> <li>macOS Catalina 10.15 running on MacBook with an Intel Core M with PAA</li> <li>macOS Catalina 10.15 running on MacBook with an Intel Core M without PAA (single-user mode)</li> </ul>
